

MicroMix

Due to calcareous condition of soils, the bioavailability of micronutrients is quite low. Trace elements are essential in order to obtain maximum plant growth. Micromix is a fine powder fertilizer that includes micronutrients and secondary nutrients as well. This product is a good comprehensive supplement delivering micronutrients to plants in a quick way.

The use of these fertilizers is strongly recommended in field crops, orchards and greenhouse.

Benefits

- Stimulates enzyme and hormone synthesis in the plant
- Resists the plants against biotic and abiotic stresses
- Prevents and corrects micronutrient deficiencies
- Improves crop yield and quality

Composition (W/W) %

N	7
MgO	5.5
Fe	3
Mn	2.5
Zn	3
Cu	0.5

Application Rate

Crops	How to use	Dosage	Time
Vegetables	Soil Applications	7 - 10 kg/ha	7 leaves Stages and one month later
Seed trees	Soil Application	0.5 - 1 kg for each Tree	Early growth stage
Seed trees	Foliar Application	2 - 4 kg per 1000 liters of water per hectare	3 times during the growth stages
Fruit trees	Soil Application	0.5 - 1 kg for each Tree	Early growth stage
Greenhouse plants	Soil Application	2 kg per 1000 square meters	Surface spreading before plowing
Fields Crops	Soil Application	15 – 20 kg/ha	Spreading the surface before plowing and repeating as a road
Fields Crops	Foliar Application	3 - 5 kg/ha	3 times during the growth stages
Pistachio	Soil Application	1 - 2 kg for each Tree	Early growth stage
