

# AminoPad

Aminopad is a growth stimulator containing plant essential amino acids and contains a wide range of plant essential amino acids. This composition contains free amino acids in the (L) form, which is highly absorbable by the plant. This combination increases the efficiency of the natural physiological processes of the plant.

## Benefits

- Stimulation of early ripening of fruits
- Increasing plant resistance against biological and environmental stresses
- Prevention of freezing stress in winter and late spring cold
- Help increase the production of proteins, enzymes and plant hormones
- Sustains stimulation of growth

## Composition (W/V) %

Total protein	46
Free Amino Acid	8

## Application rate

Crop	How to use	Dosage	Time
Vegetable	Foliar Application	3 liters per 1000 liters of water per hectare	8 leaf stage and one month later
Fruit trees	Foliar Application	3 liters per 1000 liters of water per hectare	During flowering and fruit formation
Citrus	Foliar Application	liters per 1000 liters of 3 water per hectare	Before flowering until the fruit becomes hazel
Greenhouse plants	Foliar Application	liters per 1000 liters of 2 water per hectare	Seedling transfer to fruit ripening
Field Crops	Foliar Application	3 liter/ha	8 leaves Stage until the appearance of flowers
